Emilio Mallari

Untangling complex ideas into bite-sized breakthroughs

E-Learning Developer | Instructional Designer

About Me

Hi I’m Emilio, an Instructional and E-Learning Designer with over 5 years of experience developing digital learning experiences for enterprise software and business applications.

My work focuses on turning complex information into clear, practical, and engaging learning materials that help people understand processes and apply what they've learned.

Main Highlight: Project Leadership – From Planning to Delivery

Experience leading and supporting learning projects from initial planning through development and delivery.

The next slide gives you a closer look at some of projects I’ve worked on.

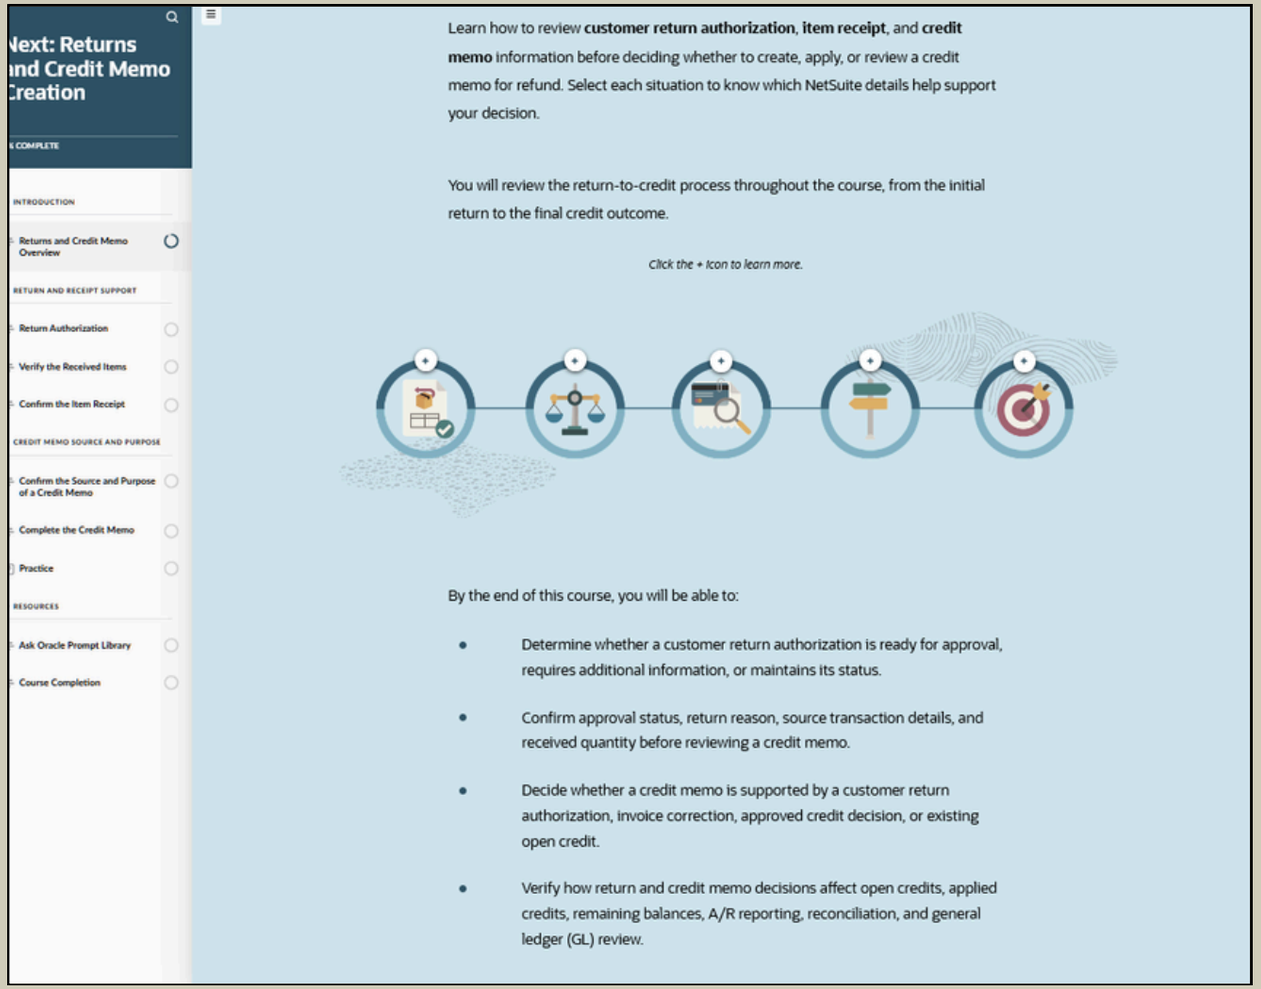

Course Highlight

Financial Course Development using AI Tools

Developed financial courses using AI tools to support content creation and refinement, while enhancing Articulate Rise lessons with custom HTML elements.

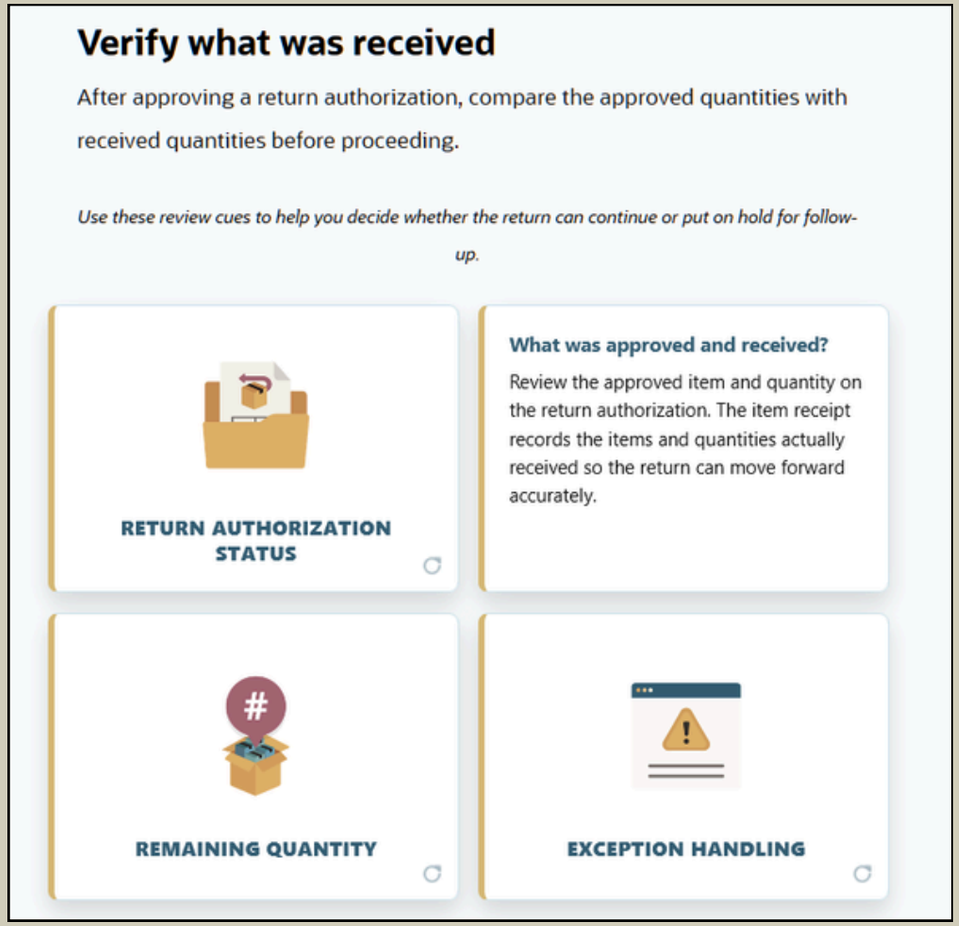

Process Overview

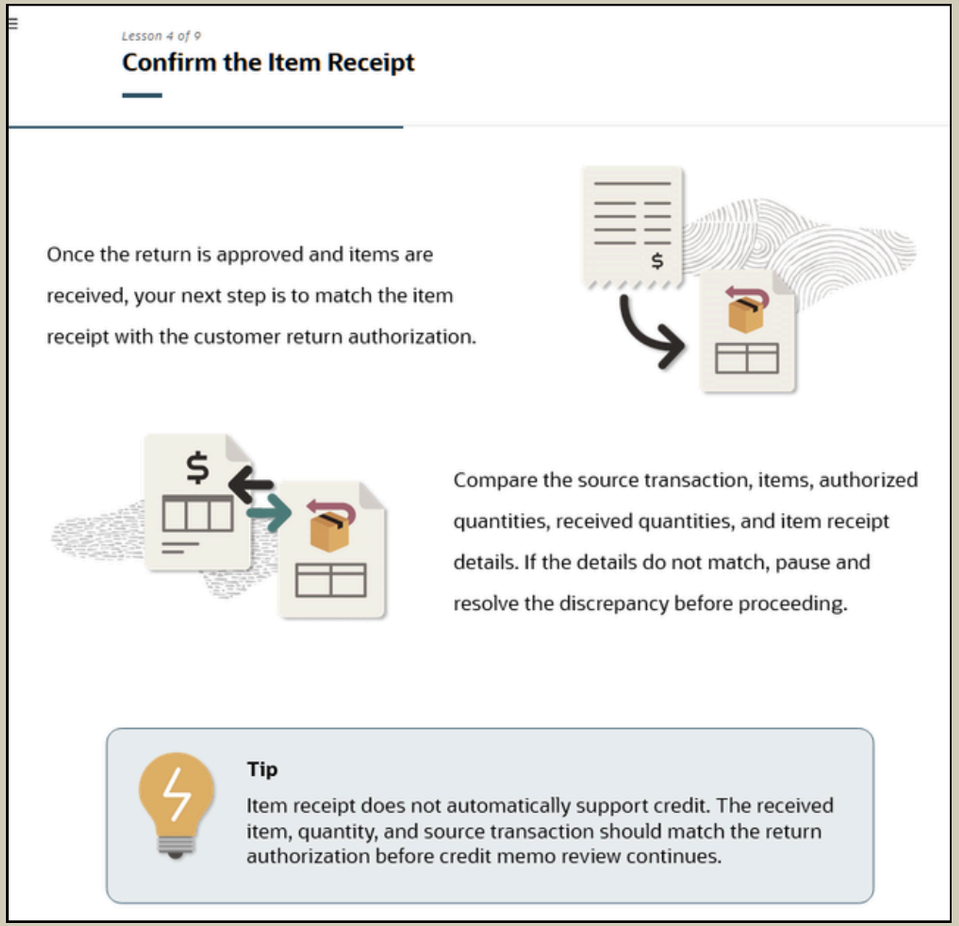

A step-by-step breakdown of a business process, helping learners understand key stages, review relevant information, and make informed decisions, alongside clear learning objectives.

Interactive Flip Cards

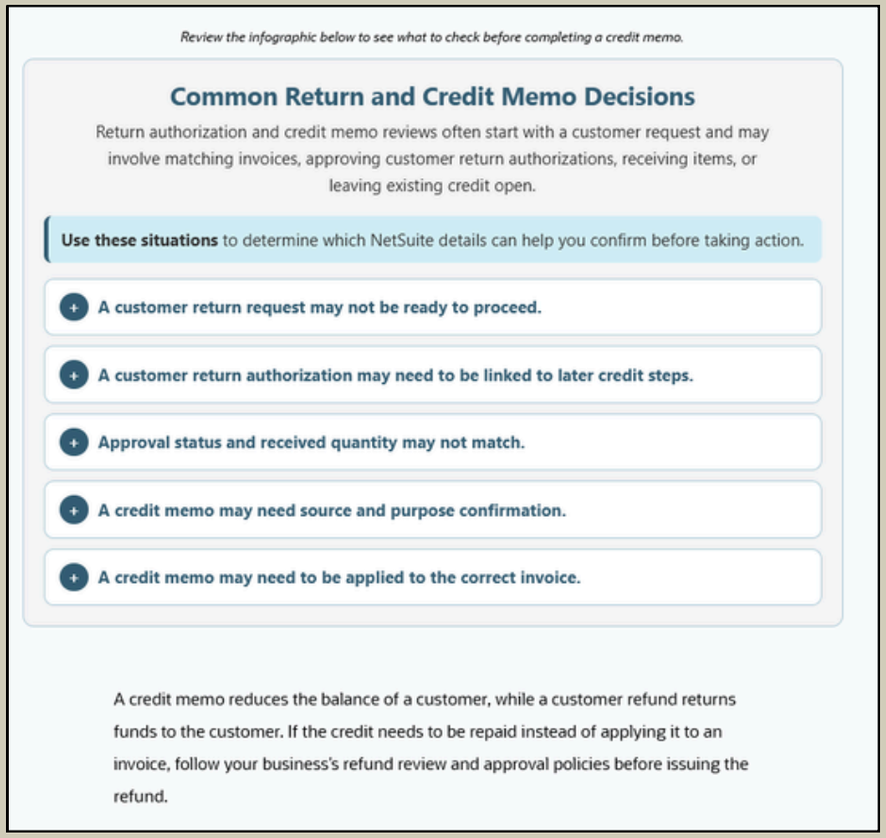

A custom **HTML** flip cards to present process criteria and definitions in an interactive, easy-to-explore format.

Lesson Introduction Layout

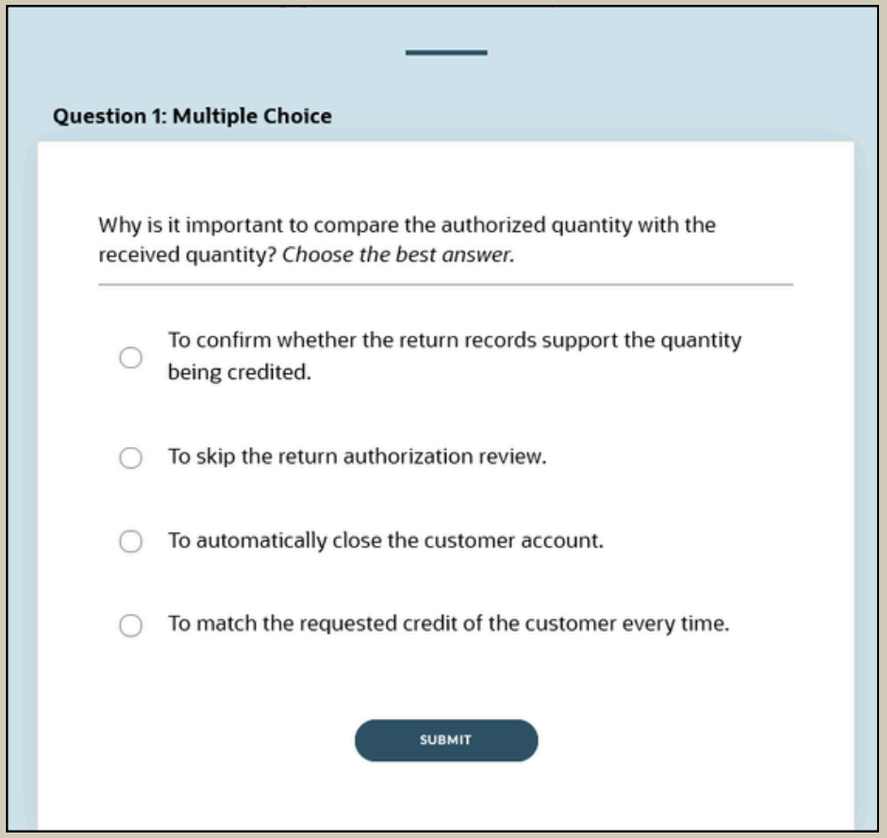

A lesson opening that introduces the topic, highlights key information, and guides learners through the content.

Custom HTML Accordion

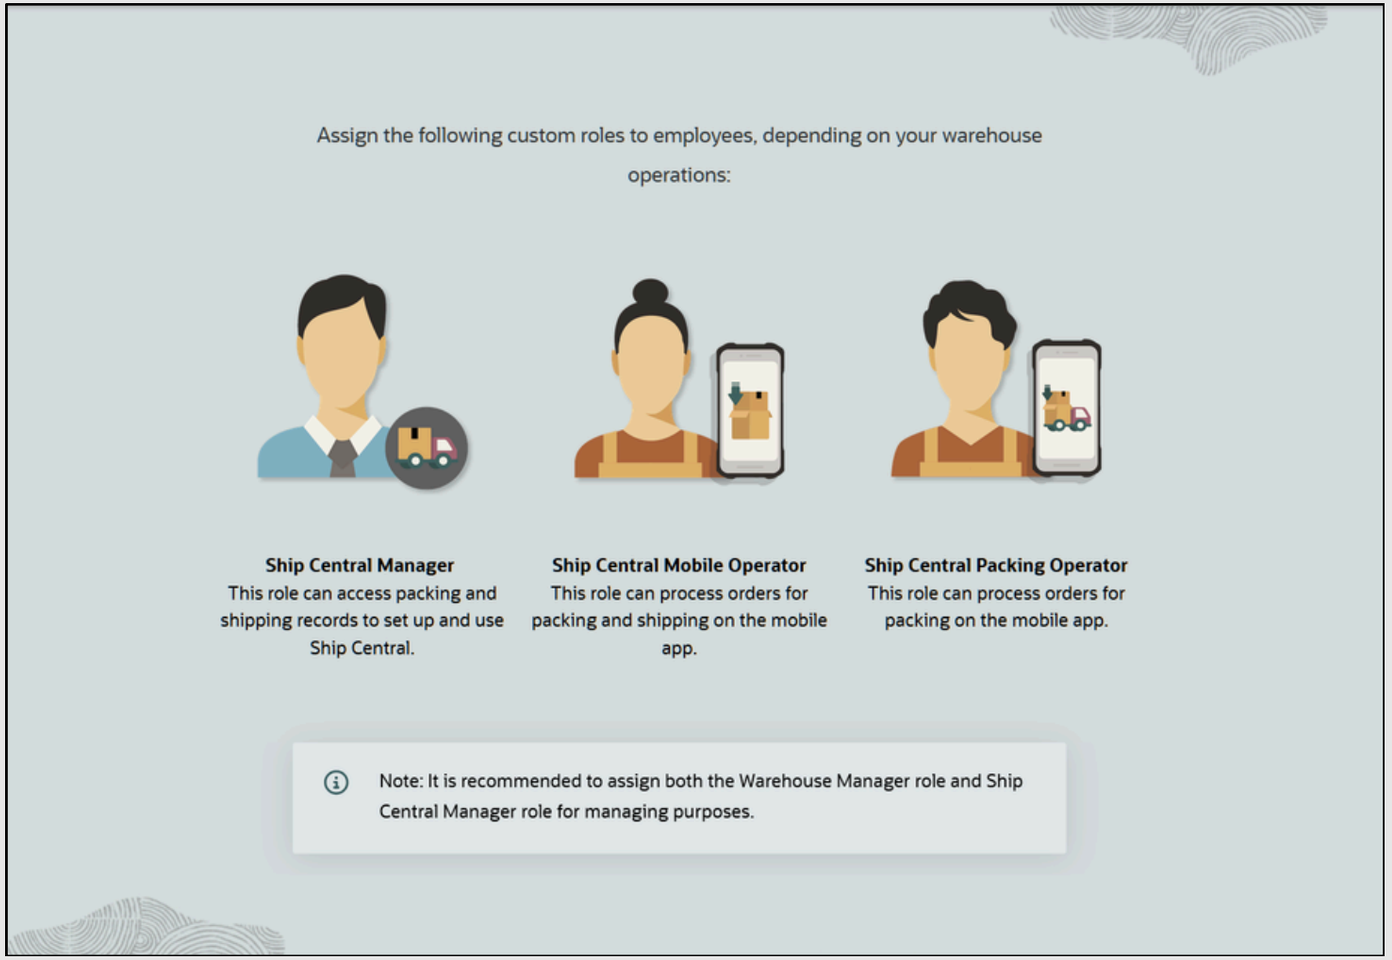

A **custom accordion** to organize detailed process guidelines into expandable sections, making information easier to navigate and review.

Quiz Lesson

An interactive **multiple-choice assessment** that helps learners apply what they've learned and check their understanding of key processes.

Roles and Responsibilities

Explains the different responsibilities assigned to each role, helping learners understand which role is appropriate for different warehouse operations.

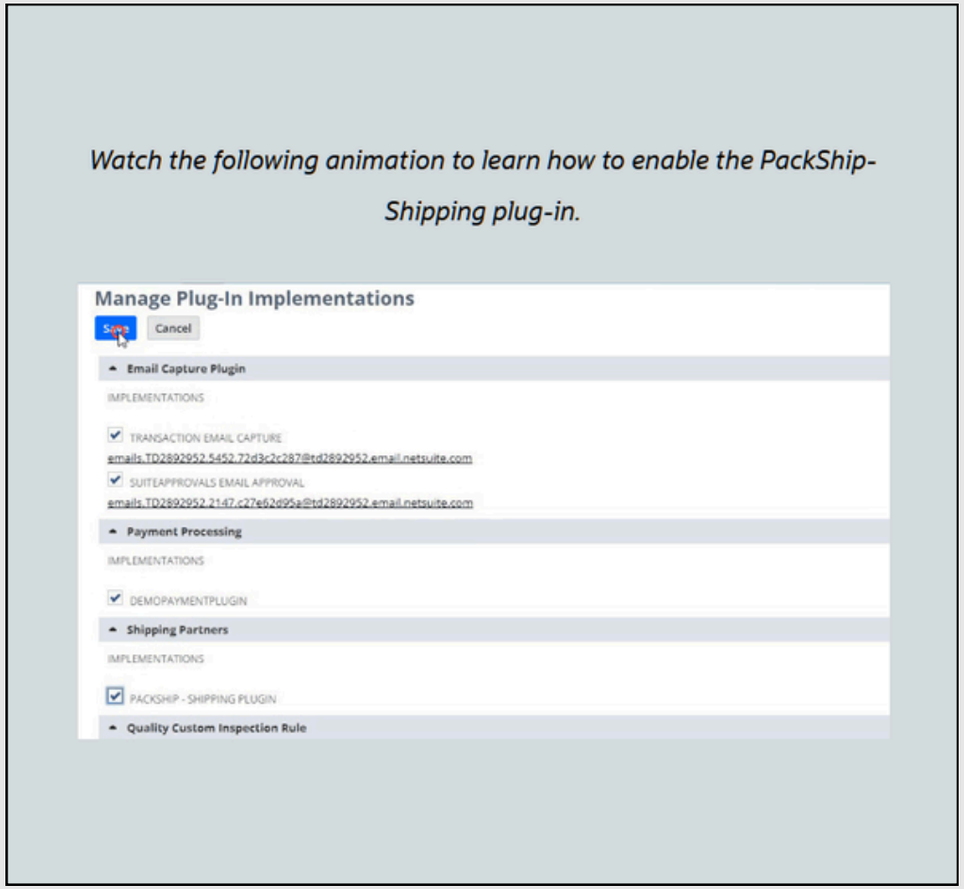

Course Highlight

Ship Central Training & User Guidance

Developed and refined training materials for Ship Central, covering user roles, warehouse operations, and plugin configuration. Created step-by-step guidance, visual demonstrations, and interactive knowledge checks to help learners understand key processes.

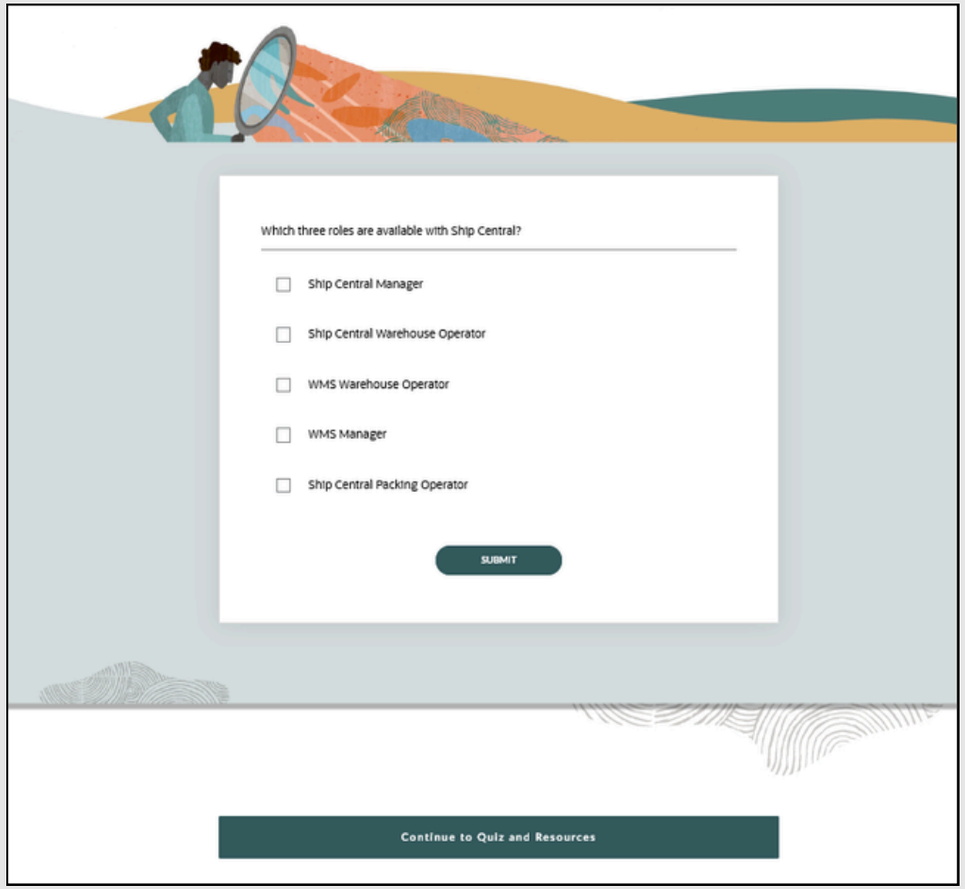

Plugin Setup Walkthrough

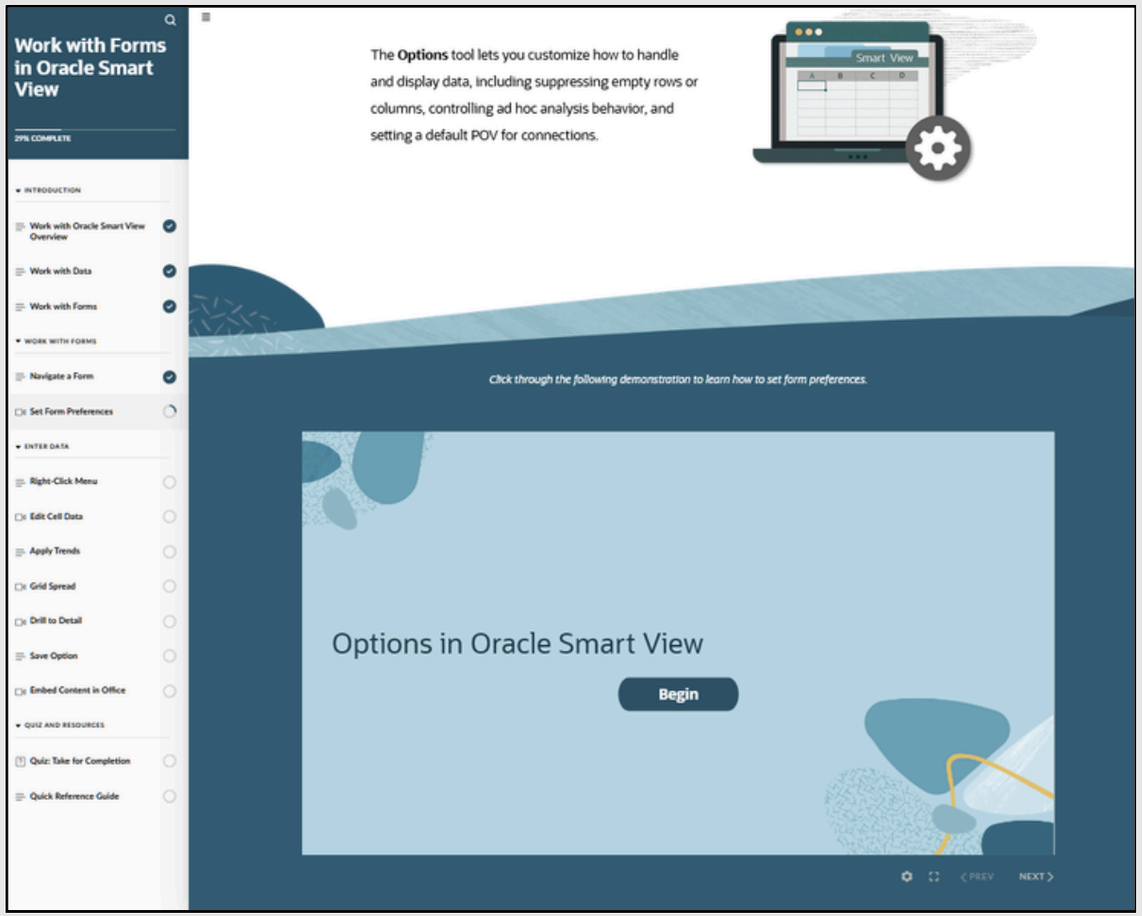

A **short animation** demonstrating how to enable the plug-in.

Knowledge Check

A **short interactive quiz** that helps learners check their understanding of the different Ship Central roles.

Software Feature Walkthrough

Introduces key form preferences and includes a step-by-step **video demonstration** showing learners how to configure settings in Smart View for Excel.

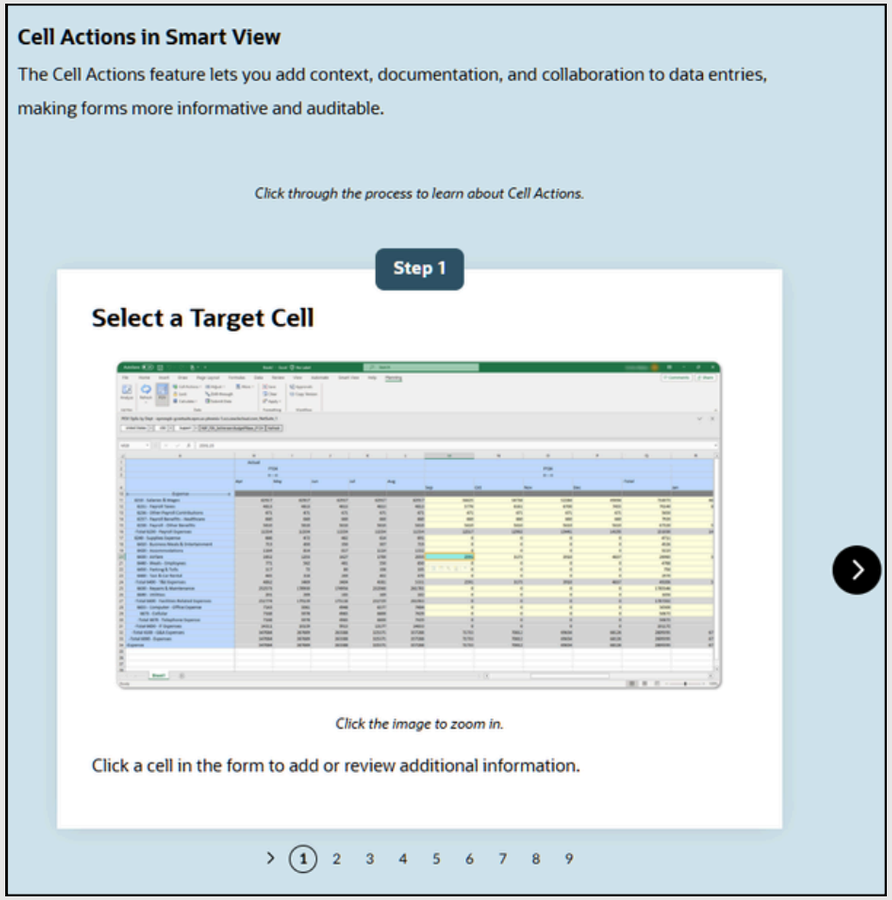

Course Highlight

Customizing Data Views in Excel

A course that teaches learners how to configure spreadsheet settings, control how data is displayed, customize analysis preferences, and manage default views when working with enterprise data through Excel.

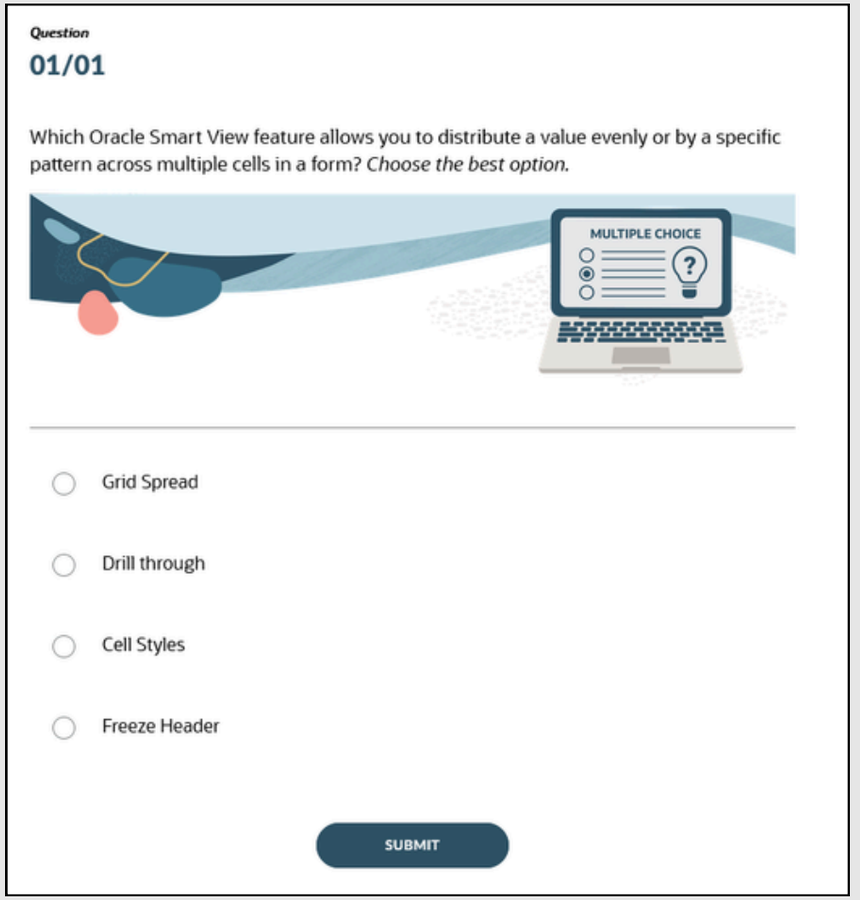

Interactive Step-by-Step Guide

An interactive **Carousel** block in Articulate Rise that combines images and instructions to guide learners through using Cell Actions in Smart View.

Quiz

A **multiple-choice** question that tests learners' understanding of the features.

E-Learning Process

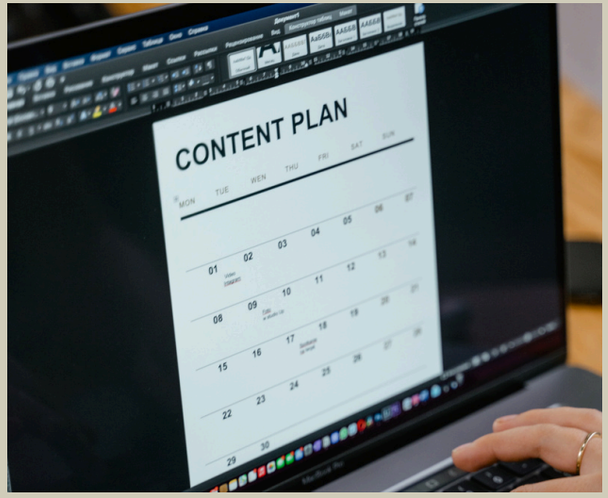

Core Expertise & Services

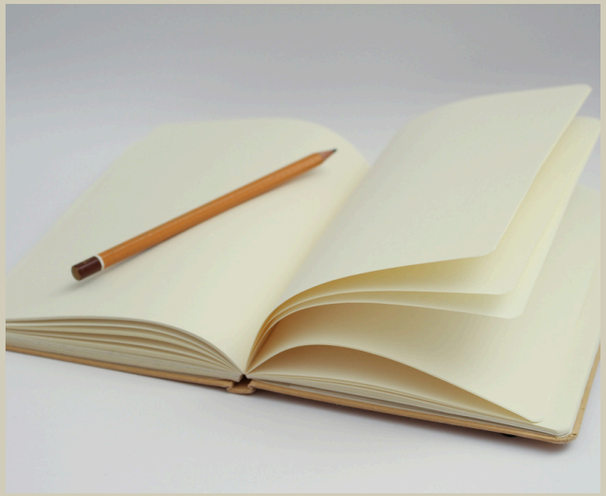

- Instructional Design: Needs Analysis, Course Mapping, Scenario-Based Learning, ADDIE/SAM Frameworks
- Content & Copywriting: Scriptwriting, Instructional Copywriting, Video & Audio Scripting
- Quality Assurance & Testing: SCORM Compliance, Accessibility Standards, Usability QA
- Technical Enablement: Enterprise Software Workflows, AI-Assisted Prompting & Content Drafting

Core Authoring and Media Tools

- E-Learning Authoring: Articulate 360 (Rise & Storyline), Adobe Captivate
- Video & Audio Production: Camtasia, Adobe Premiere, Audition, Audacity, Snagit
- Content Delivery & Hosting: Brightcove, 3Play Media, LMS Integration
- Development & QA: SCORM Testing, Basic HTML/CSS, Jira, Confluence

3-Step Philosophy

1 *Understand before you design.*

I start by understanding the learner, the subject, and the problem the training needs to solve. Effective learning begins with knowing what people need to understand and do.

2 *Make complex information clear.*

I turn technical information and complex workflows into structured, accessible content. Every explanation, visual, and interaction should serve a purpose.

3 *Design for real-world application.*

I create learning experiences that go beyond presenting information, helping learners build understanding and apply what they learn to real tasks and workflows.
